Code Java

```
1 class Solution {
2     public boolean isPalindrome(String s) {
3         String sClean = s.replaceAll("[^a-zA-Z0-9]");
4         int left = 0;
5         int right = sClean.length()-1;
6         while(left < right){
7             if(sClean.charAt(left) == sClean.charAt(right)){
8                 left++;
9                 right--;
10            } else {
11                return false;
12            }
13        }
14        return true;
15    }
16 }
```
